

Press Release:

ATONEx: eControl System Innovation - Aids to Navigation (AtoN) & iPS

September, 2015 - Instant data access and control of an entire Hazardous Area AtoN and UPS installation and system is only one key feature of the product innovation being announced by Pharos Marine at Offshore Europe 2015.

It is hard to believe that in 2015, to ensure safety, control and maintenance checks, engineers have to:

- Regularly open system control panels in all weather conditions
- Hold physical maintenance manuals
- Have to locate and review data sheets
- Need to explain what they see to gain offshore support
- Write up reports and maintenance histories
- Not have instant data, access and control on all their AtoN installations at one time

Pharos Marine's **ATONEx** e-control system offers on-site engineers and the remote control system team, the ultimate in system check, warning and control.

Key features include:

- Touch-screen control panel display
- Instant dedicated wireless tablet access to controls, datasheets, service history & reports
- Ex camera, instant imaging & video
- Individual and complete system access and data
- Configurable reporting
- Electronic and instant data integration capability

To learn more about PMAPI's **ATONEx** e-control systems and solutions, you can:

- Visit Us on Stand 4E35 at SPE Offshore Europe, Aberdeen 8-11th September 2015
- Contact us by email on: ATONEx@pharosmarine.com
- Call us on: +44 (0)20 8538 1100

For over 110 years, Pharos Marine has been proud to supply OEM products on the leading Aids to Navigation projects worldwide, and is the only AtoN OEM with its own fully dedicated, trained and certified in-life service and maintenance team.
