

White Paper / Press Release:

## Top 5 Customer Requirements for TD/PM Circle & H LED Helideck Lighting

September 2, 2015 - The UK mandatory TD/PM Circle and illuminated H installation, deadline in 2018, requires retrofit or new installations to be CAP 437 compliant on all UK offshore helidecks.

In developing the leading TD/PM Circle and illuminated H system and service, in addition to the significant safety and operational benefits of a fully compliant installation, a Top 5 Customer Requirements became a key focus within Pharos Marine Automatic Power's (PMAPI's) overall design, manufacture and service solution.

The Top Five Customer Requirements were identified as:

1. The ease and speed of retrofit implementation
2. A durable and reliable system supplied by a leading AtoN Helideck OEM with a global reach
3. The minimal impact of the lighting on Helideck operations
4. An in-house Servicing and Maintenance provision supplied directly by the OEM
5. A dedicated technical and customer service department & support

With the benefit of understanding initial TD/PM solutions in the market, PMAPI's global research and development team's mission has been to create the leading TD/PM Circle and illuminated H helideck system whilst ensuring it delivers on all of the Top 5 Customer Requirements.

Planned for launch in 2016, PMAPI are currently gearing their manufacturing and in-house installation, commissioning, servicing and maintenance resources in order to service the significant market demand.

To learn more about PMAPI's TD/PM Circle and illuminated H Helideck systems and service and Aids to Navigation, you can:
